THE GREEN SWING

AN ECO-FRIENDLY COMMUNITY

This unique project showcases a range of sustainable features that generate a communal eco-friendly environment.

Consisting of two townhouses and five units, the owners of this apartment block (The Green Swing) wanted a quality, sustainable development that promotes green living.

Each apartment features a 9 – 10 star energy rating and quality double-glazed windows, while each townhouse showcases three storeys of living space, including an open-plan kitchen, living and dining area.

The project was a joint venture designed by The Green Swing, architect Sid Thoo from Concept Design, and Right Homes. The residential complex was also built by Right Homes.

Featuring solar panels, water tanks, a communal vegetable patch, bike store and a barbecue area, the apartment block has minimised its carbon footprint. Based on its Life Cycle Assessment (LCA) results, over time the complex will use up to 80 per cent less energy than a standard home or apartment complex.

The finished project is proof that environmentally-friendly living is stylish, functional, and above all, achievable.
